Frontend JavaScript Engineer with more than 5 years of experience working in both frontend & backend technologies. I like working with people, I'm passionate about working collaboratively, learning from team interactions, and committed to delivering high-quality software solutions. Currently enhancing backend development skills with a keen interest in AI.

SKILLS

JavaScript TypeScript React Redux Firebase Express NestJS Prisma Agile Scrum
Kanban Webpack BullMQ HTML CSS Bootstrap Web3 IPFS Protractor Cypress
Storybook Google Cloud Platform Git Jest Enzyme Mocha Chai

EDUCATION

- Bachelor of Computer Sciences**
Lancaster University, United Kingdom
09/2014 - 08/2018

WORK EXPERIENCE

- JavaScript Engineer**
Mission
07/2022 - Present Montreal, Canada
 - Responsibilities*
 - Working as a team contributor on both client side & server side of the application to make the product valuable.
 - Create highly reusable & maintainable pixel perfect client side components to provide seamless experience & integrate them with backend services.
 - Create backend API services for client side components using cloud functions.
 - Review PRs to maintain code standard within the team.
 - Participate in agile methodologies. Work with Squad Lead & other stake holders in requirement specifications & ticket refinements. Actively participate in sprint planning sessions, grooming sessions, solution design meetings & retrospective sessions.
 - Apart from technical responsibilities we are regularly conducting knowledge sharing session to improve team's skills and discuss about new trends in technology world.
 - Maintaining a healthy team culture is also equally important so it is responsibility of every team member to conduct team collaboration activities to make the environment healthy and fruitful.
 - Continuously provide feedback to the Squad Lead and Tech. Lead for improving the efficiency & the processes within the team.

WORK EXPERIENCE

Full Stack JavaScript Engineer (Tech. lead & contributor)

SL2 Studio

10/2020 - 05/2022

Responsibilities

- Technically lead team to produce maximum quality while maintaining high level of motivation & healthy environment using modern day practices.
- Participate & implement agile methodologies. Work with Product Owner, Scrum Master & other stake holders in requirement specifications & stories refinement. Actively participate in brain storming sessions, planning sessions, solution design meetings, sprint refinement sessions & retrospective sessions.
- Collaborate with other developers, designers, dev ops engineer, business analysts and solution architects to plan, design, develop, test, and maintain application.
- Participate in reviews of solution designs and related code. Actively participate in new joiner's on-boarding process & provide necessary technical training to work efficiently in the team.
- Lead/represent front-end team and play a key role in designing application architecture. Work with team mates in development of core application modules. Conduct code standard definition/improvement session to continuously improve team's skill level.
- Build backend API services for frontend application. Working with micro-service architecture to support high level of scalability & maintainability.

Contact : Omair Afzal (Solution Architect) - omair@sl2.studio

Frontend Engineer

Arbisoft

08/2019 - 09/2020

Responsibilities

- Worked as a front end engineer to produce maximum quality code and high level of efficiency. Worked on an insurance agency project to convert the legacy frontend code to modern React templates. Collaborate with backend developers to refine requirements of backend interaction of the application.
- Writing and implementing meaningful unit tests using Jest and enzyme to achieve highest quality possible. Also write E2E tests using Cypress/Protractor to minimize bug reports from QA team.
- Worked with Tech. lead, Scrum master & other team members in agile methodologies. Participate in planning session which includes task estimations, technical task refinement etc. Openly speak up and point out the mistakes in retrospective sessions to improve work quality and achieve targets timely.
- Worked as an **Automation Engineer** to build an app for E2E tests for front end of an application. Creating maximum possible generic modules using POs and refined code to manage ever changing frontend application was a much challenging goal.
- Actively participate in OKRs for self improvement and whole team's skill improvement to counter fast growing tech. field.

Contact : Umer Farooq Mughal (Solution Architect, Team Lead) - umer.farooq@arbisoft.com

Associate Software Engineer

Septem Systems

09/2018 - 08/2019

Responsibilities

- Building efficient and reusable modules for front end as well as backend application. Communicate with client to understand the requirement document and refine the requirements with project manager and other team members.
- Building UI templates using HTML, CSS, Bootstrap. Converting these Templates into interactive UI components using Vue.js, Nuxt.js, Angular, Ionic-Vue frameworks.
- Participate in designing No Sql database design and writing APIs using Google Cloud Functions to interact with Firestore.
- Participate in agile methodologies (mainly Kanban) to write/refine client requirements, team collaboration and other SDLC process.

Contact : Talal Anwar (CEO, Mentor) - talal.anwar@septemsystems.com

PROJECTS

Arenaclub (Card trading marketplace)

- [Arenaclub](#) is a heaven for card collector and traders. We have created a new way to grade, collect, invest, sell and trade cards.
- My responsibilities are build and maintain both client-end and server-end of the application while maintaining high level of quality. We have recently implemented Auctions feature for cards & I actively participated in architectural design of the feature.
- Implemented component-based architecture for better code reusability and maintainability. Integrated Material UI for consistent and modern UI components, enhancing the overall aesthetic and usability of the application.
- Most difficult part was to move from legacy code to a new and scalable architecture with easy to maintain modules. We achieved it strategically by moving module wise and keeping unit test to ensure the functionality doesn't break in.
- One of the learning experience was to work closely with E2E automation team to setup Cypress and provide support for E2E tests.

HatchPath (Health & fitness platform)

- [HatchPath](#) is a health and fitness platform where health coaches can guide or provide their expertise to the people looking for guidance.
- My responsibilities are to develop client side & server side reusable and testable modules of the application using tech. stack of Next.js, Firestore, Cloud Functions.
- Participate in discovery calls, requirement specification, sprint planning and other meetings.
- Conducting PR reviews for maintaining code quality within team.

DesignPro (Design Feedback management platform)

- [DesignPro](#) is a feedback management platform for design projects. It streamlines the end-to-end process of any design project where designer and client/stakeholder can collaborate efficiently.
- My responsibilities were building and maintaining UI components and integrate them with back-end services.
- One of the exciting part in this application is multiple third party tool integration like Figma, Miro, Gdrive & Loom. User can use these tool while remaining inside DesignPro platform which give a great ease.
- Technically I have to develop templates Using HTML, SCSS from scratch. Convert these templates into React UI elements & writing unit tests using Jest to meet the high quality standard of front-end code of the application.

Virtua Magazine Reader & Builder (NFT Marketplace using React + Nest)

- [Virtua](#) magazine a portal of selling NFTs to end user. Comic application was developed to show the NFT magazines/comics along with a cool admin dashboard for artist to publish the comic/magazine art. With high quality drag and drop features of creating magazine TVM surely stood in top of the line products available in the market.
- My responsibilities were building front-end and back-end of the application, writing APIs using Nest along with Prisma were also included in my responsibilities.
- Technically, my responsibilities were to develop frontend architecture of the application, contribute in core module development and partially involved in the backend development.

KAYAK Web Automation (Protractor using TS)

- Worked on an application of automated E2E tests for a [KAYAK](#) and some other sister booking site.
- My responsibilities were to Implement all the E2E test cases using highly maintainable modules for interacting with UI components of the site using Protractor.js along with Mocha and Chai libraries. Deploying these test cases to bamboo live server and monitoring with changing requirements & UI updates.
